DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11, 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Sain (5,199,324).

Sain discloses a pedal 14, and a crank arm 18 having an axis of rotation fig. 2; and a variable attachment device that attaches said pedal to said crank arm at an angle of inclination with respect to said axis of rotation of said crank arm col. 2, lines 15 – et seq., wherein said variable attachment device comprises an arm to which said pedal is attached 30, said arm being rotatably attached to said crank arm at a rotation axis that passes through said arm and said crank arm fig. 8, and wherein rotating said arm relative to said crank arm changes said angle of inclination with respect to said axis of rotation of said crank arm col. 5, lines 54 – et seq, said angle of inclination with respect to said axis of rotation of said crank arm is fixed by tightening at least two parts to one another col. 5, lines 54 – et seq, an adjustment device operative to adjust an angle of an upper surface of said pedal with respect to an axis of rotation of said pedal col. 5, lines 54 – et seq, said adjustment device operative comprises a mechanical fastener passing through a slot that secures the upper surface to said pedal col. 5, lines 54 – et seq.,

wherein said threaded hole is tilted at a fixed non-zero angle from the axis of rotation of said crank arm col. 5, lines 54 – et seq.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sain in view of Neff.

Sain does not disclose said rotation axis comprises a rotation pin that passes through a bore formed in said arm and a bore formed in said crank arm.

Neff discloses a rotation pin 0077.

It would have been obvious to use Neff's rotation pin with Sain's pedal assembly, as it is well known as taught by Neff, to use a rotation pin, for connecting an adjust pedal assembly.

Allowable Subject Matter

Claims 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
